

EXPIREMENT - 2 8 BIT SUBTRACTION

AIM:

to write an assembly language program to implement 8 Bit subtraction using 8085 processor.

ALGORITHM:

1. start the program by loading the first data.
2. move the data to register
3. put the second data and load it
4. subtract the two register contents.
5. check for borrow.
6. Store the difference and borrow in the memory location.
7. Halt.

PROGRAM

MNEMONICS	EXPLANATION
LDA 8000	Load accumulator with the first no.
MOV B, A	move the data.
LDA 8001	load accumulator.
SUB B	subtract the data B
STA 8002	store the Data (output.)
RST 1	HALT.

INPUT :

ADDRESS	DATA
8000	4
8001	5

OUTPUT :

ADDRESS	DATA
8002	1

RESULT :

thus the program was executed successfully using 8085 processor simulator.
